Kishan Madhav AG

kishanmadhav3@gmail.com 7358350698 kishan-madhav kishanmadhav

Education

Vellore Institute of Technology *Sept 2022 – July 2026*

B Tech in Computer Science Engineering with spl in AI/ML

- CGPA: 8.5/10.0

Experience

AI Engineer *Hybrid*

Agentic Genie *December 2025 – Present*

- Led the development of AI-powered automation products, working directly with customers to understand business requirements and translate them into scalable LLM-based solutions.
- Partnered with customers and cross-functional teams to communicate product value, gather feedback, prioritize requirements, and drive AI solutions from initial discovery through production delivery.

Project Intern *Bangalore, India*

C-DAC (Centre for Development of Advanced Computing) *May 2025 – July 2025*

- Collaborated with stakeholders to understand project requirements while developing transformer-based federated learning workflows and Llama/Mistral inference pipelines.
- Presented technical findings and recommendations to stakeholders, translating complex AI concepts into clear insights and aligning proposed solutions with project requirements and expected outcomes.

Data Science Intern *Chennai, India*

CADS (Centre For Advanced Data Sciences – VITC) *May 2024 – October 2024*

- Worked on model development for ASD classification.
- Built a modified GraphSAGE and attention-based architecture for improved generalisation, embedding quality, and classification accuracy.

Projects

Social Genie *github.com/kishanmadhav/social-genie ↗*

- Built an end-to-end social media automation platform integrating X and Instagram APIs with AI-powered image/video generation, content publishing, and engagement tracking.
- Tools Used: AWS, Node.js, Express.js, Supabase, OpenAI APIs.

WhatsApp Support Portal *github.com/kishanmadhav/wa-portal ↗*

- Built a multi-tenant WhatsApp support portal on the Meta Cloud API that classifies inbound customer messages and converts them into Jira tickets automatically.
- Gave verified operators an LLM-powered conversational Jira assistant to query, create, assign, re-prioritise and resolve tickets and set broadcast reminders in natural language.
- Tools Used: Node.js, Express.js, PostgreSQL, WhatsApp Cloud API, Jira REST API, Docker, AWS EC2.

Federated Learning for Pneumonia Detection *github.com/kishanmadhav/FED_MM ↗*

- Developed a multi-model federated learning system using PyTorch and Flower, training ResNet-50, DenseNet-121, and VGG architectures across distributed clients without sharing local medical data.
- Tools Used: Python, PyTorch, Flower, ResNet-50, DenseNet-121, VGG.

Publications

Lightweight GANs in Domain-Generalized Medical Image Segmentation *Springer – SIViP ↗*

Technologies

Languages: Python, SQL, MATLAB, R, C++, C, JavaScript, Node.js, Express.js

Technologies: PyTorch, TensorFlow, MongoDB, PostgreSQL, Docker, AWS, GCP, Salesforce, Zoho CRM

Certifications: Generative AI and its Applications using Vertex AI
